Lawn Grass Seed

LOUISVILLE LAWN MIXTURE

This blend of fine-leaved grasses with White Dutch Clover is recommended for use in reseeding established lawns, patching thin spots, and for seeding newly-graded yards where a permanent stand of Kentucky Blue Grass is desired. Ready for cutting after 30 days of good weather. This seed should be broadcast evenly to avoid a patchy appearance.

For New Lawns. The soil should be well prepared, and Bone Meal and Sheep Manure should be well incorporated with the soil. Seed should be sown at the rate of 1 pound for every 300 square feet, selecting a time when there is no wind. After sowing, roll or rake lightly.

For Old Lawns. Bare spots should be vigorously roughed with a steel rake. An application of SHEEP MANURE will act as a stimulant to patches lacking plant food. Scatter the seed as evenly as possible, then rake or roll lightly.

Several sowings are better than one. Do not risk all your seed at one time. The seed may be washed away by a downpour of rain immediately after planting. A good plan is to sow a part of your seed walking East and West—the next time walk North and South, in this way assuring an even distribution. Very good success can be had from scattering seed on a soft snow. In spring it is well to rake out all dead grass before sowing.

Use Grass Seed Generously. Where lawns are kept in neat condition, the plants do not produce seed as Nature intended. This deficiency must be supplied by an occasional seeding.

Prices: 1 lb., 60 cents; 5 lbs., \$2.75; 10 lbs., \$5.00.

Shade Grass Mixture

For use in courts, under trees and shady places, we have produced a mixture with shade-loving grasses which will give excellent results where other grasses fail. When the grass has become established, water generously once a week, and give an application of Sheep Manure and Bone-Meal at least twice a year.

Prices: 1 lb., 65 cents; 5 lbs., \$3.00; 10 lbs., \$5.50.

Kentucky Blue Grass

This seed should be used only on well-established lawns, as it does not "stool out" or produce a turf until the second year. On newly-graded soil, Blue Grass should have a nurse crop of Red Top and White Dutch Clover.

Prices: 1 lb., 55 cents; 5 lbs., \$2.50; 10 lbs., \$4.75.

Damping Off of Seedlings

Seed planted in boxes and frames are subject to a fungus disease known as "damping off." The seedlings fall over as though pinched at the base of the stem. There is no cure for the plants affected.

To prevent damping off:

- Avoid sowing seed too thickly.
- Water seed pans from below.
- Never water in late afternoon.
- Give plenty of air and sunshine.
- Use SEMESAN as directed by the manufacturers.

Hardy Phlox

Roses

The roses we offer for the season of 1945 are of the same sturdy stock and high quality and produced by the same growers as those offered heretofore. Due to the prevailing conditions of labor and transportation, we will not pot our roses in earth, but will deliver plants to our customers Bare Root. We urge our customers to place orders early to be sure of getting the desired varieties. Weather permitting, deliveries will be made early in March. Upon arrival, roses should be planted immediately or "heeled in" deep until they can be properly planted. Under no circumstance should plants be kept in a warm, dry place.

Prices: 80 cents each; \$8.50 per dozen.

Autumn. H. T. Vigorous and upright. Double blooms of orange yellow and red.

Betty Uprichard. H. T. Delicate salmon-pink flowers with a suggestion of carmine. Fragrant. Its popularity as a pink rose is well deserved.

Caledonia. H. T. A desirable white. Long pointed bud opening to a very double, long lasting, moderately fragrant flower.

Condesa DeSastago. H. T. Reddish copper inside with rich gold reverse. The striking flowers are borne on vigorous branching plants. An unusual rose which is sure to make many friends.

Director Rubio. H. T. Bright cochineal red flower on strong stems.

Duquesa De Penaranda. H. T. A beautiful flower described as cinnamon-peach or copper-apricot. The fragrant flowers are held on strong, upright growth, making it a splendid variety for cutting.

Editor McFarland. H. T. Deep pink. Long buds on firm erect stems.

Etoile de Hollande. H. T. We consider this the best red rose. The flowers are fragrant, large and beautiful. The canes are strong and the foliage healthy.

Mme. Joseph Perraud. H. T. Long, slender buds of nasturtium-orange opening to pink buff. Rare fragrance. An excellent flower for cutting or exhibition.

Mrs. Pierre S. Du Pont. H. T. Deep golden yellow. Long pointed bud. Fragrant.

Picture. H. T. Warm pink, undertones of salmon; strong and vigorous.

President Herbert Hoover. H. T. Flame, scarlet and yellow. As a garden rose, it is far superior to Talisman.

Radiance. H. T. Well-known globular flowers of rose-pink.

Red Radiance. H. T. Rose-red flower borne on strong stem.

Sister Therese. H. T. Golden daffodil-yellow flowers on sturdy long canes.

Climbing Rose

Paul's Scarlet Climber. H. W. Intense scarlet flowers. Very popular.

Talisman. Cl. H. T. Golden yellow and copper.

Care of Roses

Planting. It should be borne in mind that roses will do much better in well-drained clay soil with plenty of sun. The plants should be set out as soon as received. The rose beds should be so planned that they will be at least three feet wide, but never more than six feet in width. Holes to receive plants should be dug at least fifteen inches deep and equally as wide, so that the roots may be spread easily. Well-seasoned cow manure and a little bone meal may be incorporated with the soil. Fill in earth and pack firmly so as to leave no air pockets. The juncture of the root stock and stems should be just beneath the surface. Newly-planted roses should be well watered. We recommend placing Hybrid Tea Rose bushes eighteen inches apart. A little crowding makes for longer and straighter stems.

Pruning. For best results the Hybrid Teas should be cut back to about six or eight inches, leaving an outside bud at the top of the cane. Climbing roses bloom on canes of the previous season's growth, hence the old wood should be cut out each year.

Fertilizing. A handful of bone meal and a four-inch pot full of sheep manure should be worked into the surface soil. This will insure luxuriant growth, good stems and flowers of splendid substance.

Winter Protection. In late fall or early winter, earth should be heaped over the crowns to a depth of at least ten inches. If available, cow manure should be placed around the mounds. This hilling up process will protect the bushes against the drying action of winter winds, frost, and sun.

About the last week in March the winter covering should be removed, fertilizer applied and the bed raked off smooth.

Summer Care. A top dressing of peat moss not only gives the rose bed a neat appearance, but causes better growth by conserving moisture and keeping down weeds. Grass clippings may be used instead of peat moss. If no mulch is used, keep the top soil pulverized with a sharp rake. After every rain, the crust should be broken up as soon as the ground is mellow enough to work.

Insects and disease will inevitably do much damage unless preventative measures are taken. Dust thoroughly once a week with Massey dust or spray with a combination of Bordeaux Mixture and Arsenate of Lead. When plant lice appear, spray thoroughly with Black Leaf 40.
